Summary

Junior Backend / Full-stack developer with experience building production full-stack applications. I specialize in TypeScript, NestJS, Next.js, and PostgreSQL. I can break tasks into milestones, write tests, configure CI/CD, and ship product features. I use AI tools professionally for task decomposition, code analysis, debugging, test generation, and documentation. I validate all work through lint, typecheck, tests, CI/CD, and production verification. I'm looking for a role in a product team where I can grow backend and full-stack skills.

Key Skills

- **Languages:** TypeScript, JavaScript, basic Python
- **Backend:** NestJS, Node.js, REST API, WebSocket / Socket.io, JWT, RBAC, database migrations
- **Frontend:** Next.js (App Router), React, Tailwind CSS
- **Database / Infrastructure:** PostgreSQL, Prisma, Redis, Docker, Vercel, Render, Cloudflare
- **Testing / Quality:** Jest, Vitest, Testing Library, Supertest, Playwright
- **Tools:** Git, GitHub Actions, Swagger

Projects

LetsChat — production full-stack messenger / collaboration app | 2026

Live demo: lets-chat-web.vercel.app

Repo: github.com/Mellowin/lets-chat-modern-rebuild

Stack: NestJS 11 · PostgreSQL 15 · Prisma · Next.js 16 · React 19 · TypeScript · Tailwind CSS · Socket.io · S3-compatible storage · GitHub Actions · Render · Vercel

- Built a NestJS backend with modular controllers/services/repositories, JWT auth with access/refresh token rotation, bcrypt hashing, and multi-device session management.
- Delivered real-time messaging via Socket.io for channels, DMs, and group chats, with membership revalidation on every live event, typing indicators, reactions, replies, and read receipts.
- Implemented workspaces with OWNER/ADMIN/MEMBER RBAC, private channels that return 404 to non-members, standalone group chats with expiring invite links, contacts, and global search.
- Secured file attachments through an authenticated API proxy for upload/download, MIME/extension validation, size limits, and Cyrillic filename support.
- Added Web Push notifications (VAPID), PWA installability with service worker and offline fallback, and EN/UK/RU localization with Cyrillic usernames.
- Set up CI/CD: GitHub Actions runs lint/typecheck/tests/builds, API E2E on a PostgreSQL service container, production migration, Render deploy hook, and Vercel frontend deploy; post-deploy verifiers cover auth, permissions, attachments, groups, contacts, and safety.

NotGuilty Legal — commercial website for a law firm | 2026

Stack: Next.js · TypeScript · Tailwind CSS · Telegram API · Google Sheets · Resend · Cloudflare · Vercel

- Built a full commercial website for a law firm: landing pages, service pages, lead-capture forms.
- Integrated Telegram notifications, Google Sheets, and Resend for lead processing and client follow-up.
- Implemented rate limiting, JWT-protected admin panel with IP binding, and bot protection.
- Deployed on Vercel behind Cloudflare for fast load times, HTTPS, and basic SEO.

WagerPlay Backend — backend for a gaming platform | 2026

Stack: NestJS · TypeScript · PostgreSQL · Redis · WebSocket · JWT

- Developed a NestJS backend for a gaming platform: matchmaking, WebSocket game sessions, wallet, and transactions.
- Designed the PostgreSQL schema for users, matches, bets, and balances; used Redis for caching and state.
- Covered key flows with unit tests and set up API authentication and basic security measures.

Work Style

- I work best with clear tasks and code review; I decompose features into milestones with tests and verifiers.
- Comfortable with production deployment, database migrations, and post-deploy checks.
- Open to office / remote / hybrid in Kyiv and remote worldwide.

Languages

- Ukrainian: native
- English: [level]
